

Power

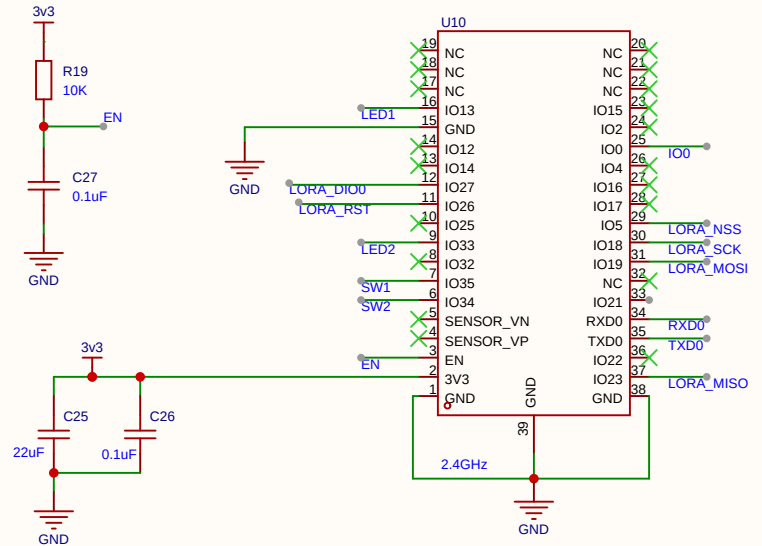

The diagram illustrates a DC-DC converter circuit, specifically a TPS63001DCR, which is a step-down converter. The input voltage is VCC, which is connected to the VIN pin (pin 5) through a 10uF capacitor (C3). A 100 Ohm resistor (R3) is connected between VIN and VINA (pin 8). A 0.1uF capacitor (C6) is connected between VIN and GND. The EN pin (pin 6) is connected to VCC. The PS/SYNC pin (pin 7) is connected to GND. The output is connected to a 2.2uH inductor (L1) and a 3V3 load. The output filter consists of a 10uF capacitor (C4) and a 10uF capacitor (C5) connected to GND. The converter is labeled U8, TPS63001DCR. A feedback network is connected to the FB pin (pin 10) and the PAD pin (pin 11).

Push Switch

The diagrams illustrate four different wiring configurations for push switches:

- SW1:** A single switch with terminals 1, 2, 3, and 4. Terminal 1 is connected to a green wire labeled U6. Terminal 2 is connected to a green wire labeled YZA-056-5.0. Terminal 3 is connected to a green wire labeled YZA-056-5.0. Terminal 4 is connected to GND.
- SW2:** A single switch with terminals 1, 2, 3, and 4. Terminal 1 is connected to a green wire labeled 2U5. Terminal 2 is connected to a green wire labeled YZA-056-5.0. Terminal 3 is connected to a green wire labeled YZA-056-5.0. Terminal 4 is connected to GND.
- SW1:** A single switch with terminals 1, 2, 3, and 4. Terminal 1 is connected to a green wire labeled SW1. Terminal 2 is connected to a green wire labeled JO0. Terminal 3 is connected to a green wire labeled KH-6X6XSH-SHM. Terminal 4 is connected to a green wire labeled C29. A 0.1uF/50V(10%) capacitor is connected between C29 and GND.
- SW2:** A single switch with terminals 1, 2, 3, and 4. Terminal 1 is connected to a green wire labeled 1SW2. Terminal 2 is connected to a green wire labeled EN. Terminal 3 is connected to a green wire labeled KH-6X6XSH-SHM. Terminal 4 is connected to a green wire labeled C29. A 0.1uF/50V(10%) capacitor is connected between C29 and GND.
